FMMS Fontys Module Management System.

OER Onderwijs Examen Regeling.

Chapter 1

Introduction

This document specifies all the requirements of the SOFA project during the seventh semester of the Software Engineering course at Fontys Hogeschool Techniek en Logistiek. The project is named Fontys Module Management System (FMMS).

1.1 Purpose

The purpose of this project is to streamline the process of changing module descriptions for the classes in the Software Engineering course, offering one centralized source of truth for the information contained in the module descriptions and the Onderwijs Examen Regeling (OER), and a controlled way of changing the descriptions if need be.

1.2 Scope

The scope of this document contains all the requirements of the system to be created.

1.3 Overview

This document is divided into three chapters. Chapter one will introduce the document and its purpose. The second chapter will give an overview of the functionality of the system and other interactions. The third chapter will specify all detailed requirements gathered which shall be implemented.

Chapter 2

Overall Description

This chapter will describe the general factors that will influence the product and its requirements.

2.1 Product Perspective

The product will be a software system that interacts with a database and a frontend to deliver and receive data.

Input some general diagram or description of the system's architecture

Describe interfaces

2.2 Product Functions

The general major functions of this system will be

- CRUD operations on module data
- Generating and releasing module descriptions and the OER
- Logging changes

2.3 Users

The users of the system will be

- Teachers
- Department Heads
- Curriculum Owner

2.4 External Interfaces

Any external software interfaces are listed here

Table 2.1: User Interaction Interface

Description	User interface
Purpose	Display data to the user and allow modification
Source of input	User interaction
Destination of output	Backend system

Table 2.2: Database Interface

Description	Database connection to a PostgreSQL database
Purpose	Store and retrieve data from and to the system
Source of input	Backend system
Destination of output	Backend system

Table 2.3: PDF Generator Interface

Description	PDF Generator
Purpose	Generate a PDF file
Source of input	Backend system
Destination of output	Backend system

Chapter 3

Requirements

This chapter will detail all non functional and functional requirements of the system.

3.1 Nonfunctional Requirements

TODO: Questions for the customer to be answered

Non-functional Requirements

Should it run on any environment?

Should it be able to run on Docker?

Mobile? Website of desktop application?

Localization? German / English / Dutch

Speed requirement? Stability requirement?

Conflicts when editing the same stuff? Concurrency? How?

Availability? Outside office hours?

Should it be modifiable?

Security level?

3.2 User Stories

input user stories here

3.3 Use Cases

User stories in bigger detail here once required

3.4 Mockups
