2.1	Code . . . . .	4
2.2	Commits . . . . .	4
<b>3</b>	<b>Appendix A Review Template</b>	<b>5</b>

# 1 Documents

This section outlines the quality standards and processes for all documents produced during the SOFA project.

- All documents shall be written in LaTeX.
- Every document's source and rendered result shall be committed and versioned.
- All documents shall be reviewed at least once by another person either inside or outside of the team using the template found at Appendix A Review Template.
- The results of document reviews shall be stored alongside the original document.
- An improved version of a document shall be reviewed once more to guarantee feedback has been processed and passes standards.
- If a document does not pass a review, this document shall be improved again.
- Documents to be reviewed will be added to the week's backlog.

## 2 Software

This section outlines the quality standards and processes for software development during the SOFA project.

### 2.1 Code

- All code committed shall be committed alongside relevant testfiles.
- All code relevant to a new feature, fix or any other change will be developed in a new branch.
- Any branch that is to be merged into the master branch will be submitted in a pull request and reviewed by at least one person. Code reviews and any CI tool must also pass before merging.
- All code shall be 100% tested at all time. If it is not, changes will not be accepted into the master branch.
- Tests shall be useful, concise and descriptive. Don't test only one scenario, but every scenario imaginable.
- All code shall be documented clearly, either by simple self documenting code or written documentation.

### 2.2 Commits

- Commit messages will have a descriptive header describing the content of the commit.
- A commit message's body could explain more about the change. Why something is changed, what it does etcetera.
- Commits will remain small and relevant to only one change. If a commit changes more than two things, it is too big!

### 3 Appendix A Review Template

Date of Review  
Document Title  
Document Date  
(Optional) Commit ID  
Reviewer Name  
Reviewer Comments
