Chapter 1

Introduction

The purpose of the Configuration Management Plan is to describe how configuration management (CM) will be conducted throughout the project life-cycle. This includes documenting how CM is managed, roles and responsibilities, how configuration item (CI) changes are made, and communicating all aspects of CM to project stakeholders. Without a documented configuration management plan it is likely that CIs may be missed, incomplete, or unnecessary work is done because of a lack of version and document control. While a configuration management plan is important for all projects, this is especially so for software and other information technology (IT) projects.
